

# Hierarchical Clustering

#### Part 3

#### Distance between two clusters

Cluster P and cluster Q are merged and formed a new cluster denoted by P+Q. Cluster P contains  $n_P$  objects and cluster Q contains  $n_Q$  objects. Another Cluster R contains  $n_R$  objects.

The distance between cluster R and cluster P+Q is given below for few linkage methods.

#### Distance between two clusters

Cluster P and cluster Q are merged and formed a new cluster denoted by P+Q. Cluster P contains  $n_P$  objects and cluster Q contains  $n_Q$  objects. Another Cluster R contains  $n_R$  objects.

The distance between cluster R and cluster P+Q is given below for few linkage methods.

$$d(R,P+Q) = w_1 d(R,P) + w_2 d(R,Q) + w_3 d(P,Q) + w_4 |d(R,P) - d(R,Q)|$$

where the weights  $w_1$ ,  $w_2$ ,  $w_3$ ,  $w_4$  are method specific, provided by the table below:

Name	$w_1$	$w_2$	$w_3$	$w_4$
Single	1/2	1/2	0	-1/2
Complete	1/2	1/2	0	1/2
Average	$n_{\rm P}/(n_{\rm P}+n_{\rm Q})$	$n_{\rm Q}/(n_{\rm P}+n_{\rm Q})$	0	0
Weighted	1/2	1/2	0	0
Centroid	$n_{\rm P/}(n_{\rm P}+n_{\rm Q})$	$n_{\mathrm{Q/}}(n_{\mathrm{P}}+n_{\mathrm{Q}})$	$-(n_{\rm P}n_{\rm Q})/(n_{\rm P}+n_{\rm Q})^2$	0
Median	1/2	1/2	-1/4	0
Ward	$(n_{\rm R} + n_{\rm P})/(n_{\rm R} + n_{\rm P} + n_{\rm Q})$	$(n_{\rm R} + n_{\rm Q})/(n_{\rm P} + n_{\rm P} + n_{\rm Q})$	$n_{\rm R}/(n_{\rm R}+n_{\rm P}+n_{\rm Q})$	0
Felxibeta	$(1-\beta)/2$	$(1-\beta)/2$	β	0

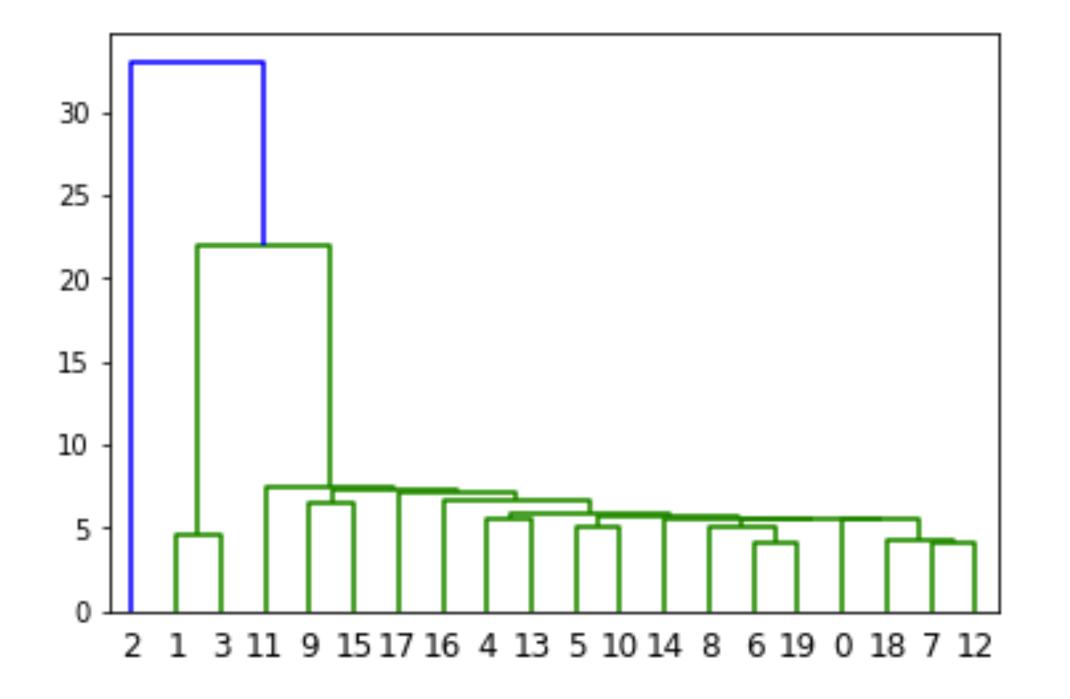

## Linkage method: Single

Distance between clusters  $C_i$  and  $C_j$  is the minimum distance between any object in  $C_i$  and any object in  $C_j$ 

Can handle non-elliptical shapes

Sensitive to noise and outliers

It produces stretched out clusters

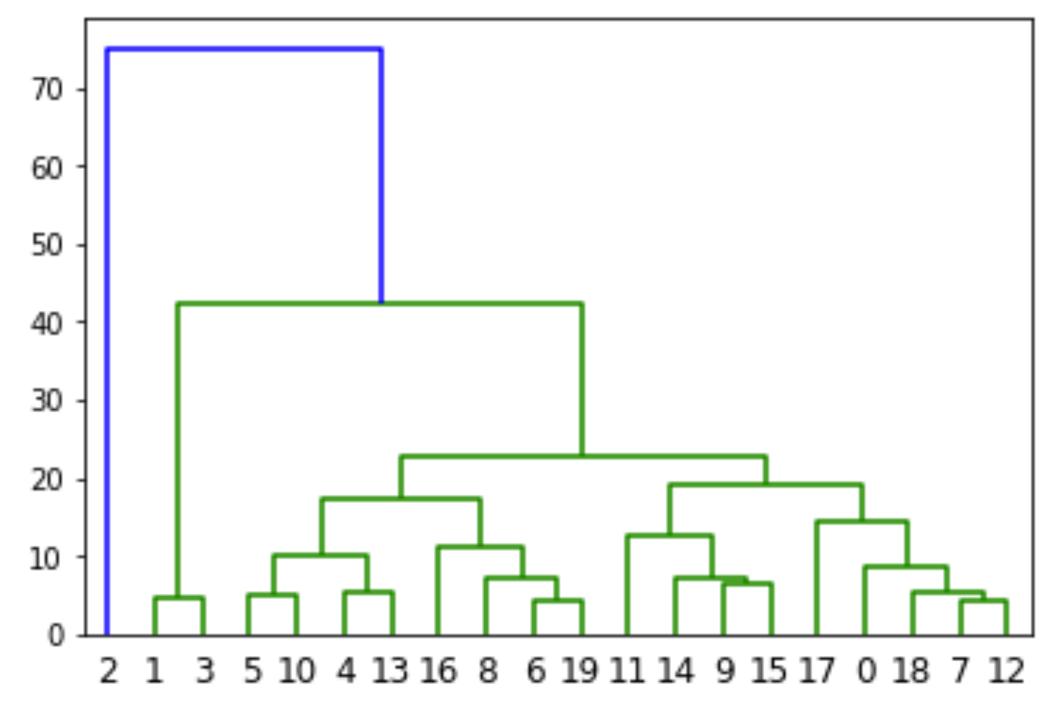

Hierarchical clustering with single linkage method

#### Linkage method: Complete

Distance between clusters  $C_i$  and  $C_j$  is the maximum distance between any object in  $C_i$  and any object in  $C_j$ 

More equal sized or balanced clusters

Less vulnerable to noise

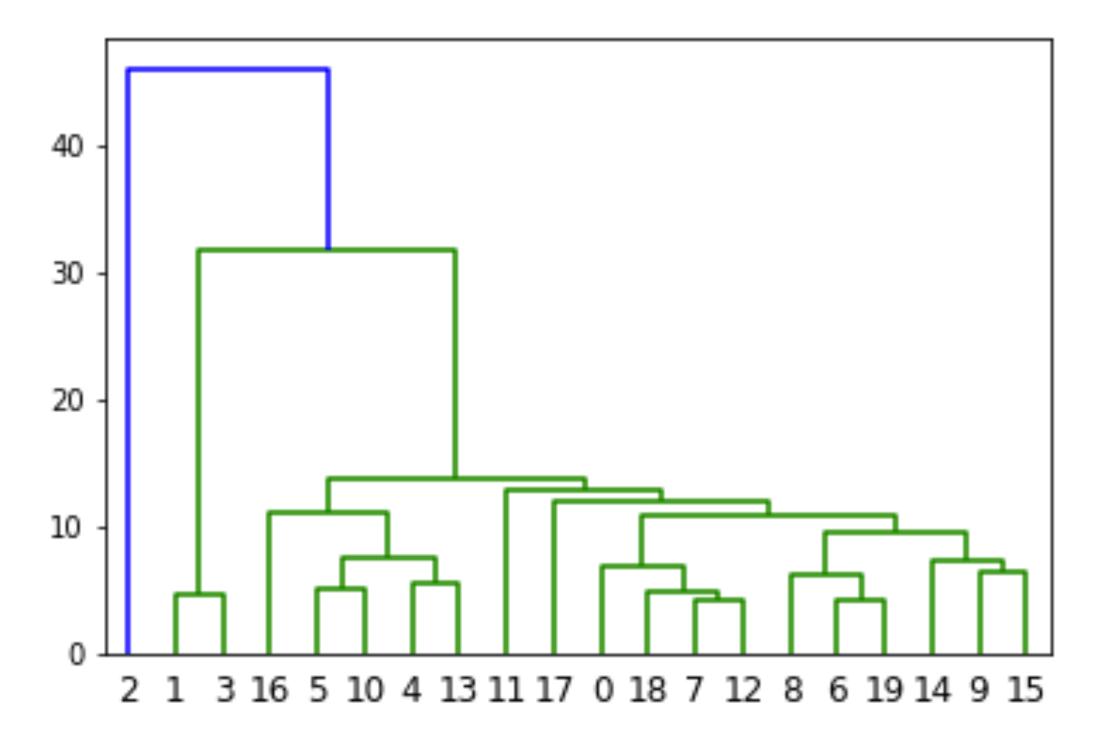

Hierarchical clustering with complete linkage method

#### Linkage method: Average

Distance between clusters  $C_i$  and  $C_j$  is the average distance between any object in  $C_i$  and any object in  $C_j$ 

In-between single linkage and complete linkage

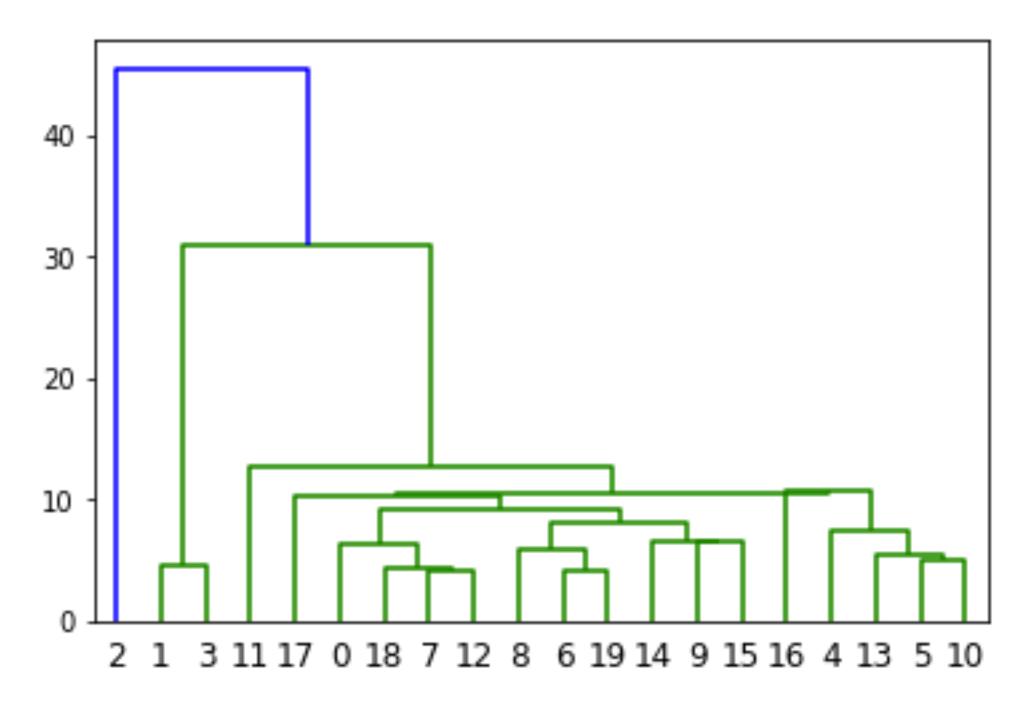

Less vulnerable to noise

Hierarchical clustering with average linkage method

## Linkage method: Centroid

Distance between clusters  $C_i$  and  $C_j$  is the distance between centre of  $C_i$  and centre of  $C_j$ 

Hierarchical clustering with centroid linkage method

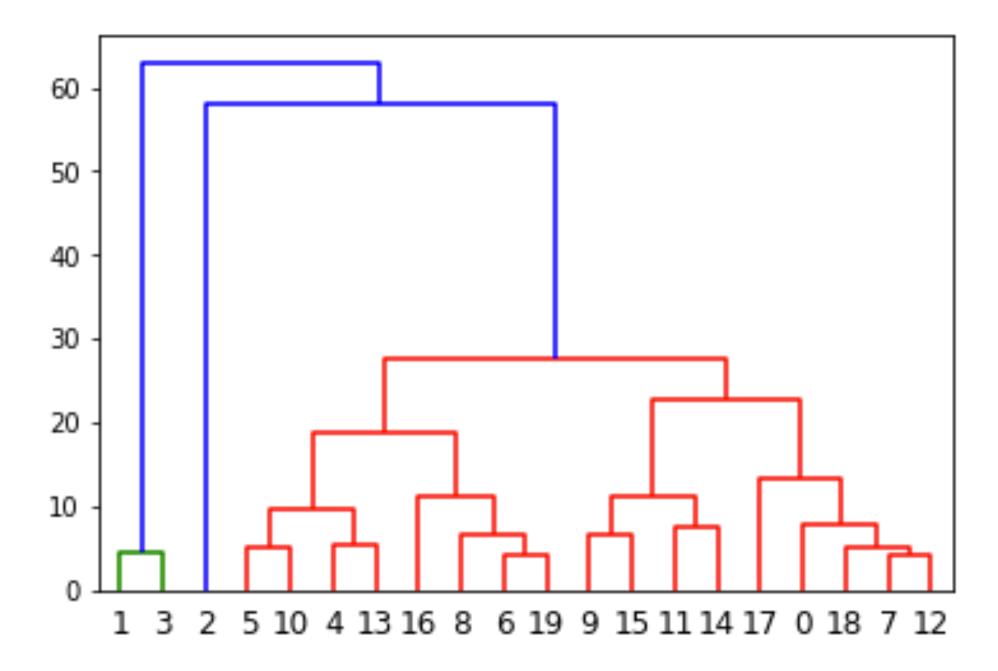

## Linkage method: Ward

Distance between clusters  $C_i$  and  $C_j$  is the difference between the total within cluster sum of squares for the two clusters separately, and the within cluster sum of squares resulting from merging the two clusters in cluster  $C_{ij}$ 

Behave like k-means clustering in hierarchical framework

Suitable for initializing seed in k-means clustering

Less vulnerable to noise

Hierarchical clustering with ward linkage method

#### Distance between two clusters

Cluster P and cluster Q are merged and formed a new cluster denoted by P+Q. Cluster P contains  $n_P$  objects and cluster Q contains  $n_Q$  objects. Another Cluster R contains  $n_R$  objects.

The distance between cluster R and cluster P+Q is given below for few linkage methods.

$$d(R,P+Q) = w_1 d(R,P) + w_2 d(R,Q) + w_3 d(P,Q) + w_4 |d(R,P) - d(R,Q)|$$

where the weights  $w_1$ ,  $w_2$ ,  $w_3$ ,  $w_4$  are method specific, provided by the table below:

Name	$w_1$	$w_2$	$w_3$	$w_4$
Single	1/2	1/2	0	-1/2
Complete	1/2	1/2	0	1/2
Average	$n_{\rm P}/(n_{\rm P}+n_{\rm Q})$	$n_{\rm Q}/(n_{\rm P}+n_{\rm Q})$	0	0
Weighted	1/2	1/2	0	0
Centroid	$n_{\rm P/}(n_{\rm P}+n_{\rm Q})$	$n_{\mathrm{Q/}}(n_{\mathrm{P}}+n_{\mathrm{Q}})$	$-(n_{\rm P}n_{\rm Q})/(n_{\rm P}+n_{\rm Q})^2$	0
Median	1/2	1/2	-1/4	0
Ward	$(n_{\rm R} + n_{\rm P})/(n_{\rm R} + n_{\rm P} + n_{\rm Q})$	$(n_{\rm R} + n_{\rm Q})/(n_{\rm P} + n_{\rm P} + n_{\rm Q})$	$n_{\rm R}/(n_{\rm R}+n_{\rm P}+n_{\rm Q})$	0
Felxibeta	$(1-\beta)/2$	$(1-\beta)/2$	β	0
